

ORAL HEALTH STATUS

Recently, our common patient visited our dental office. The patient's oral health is challenged to the point where we feel it may have an impact on general health. For the completeness of your medical file, we would like to share an overview of his/her oral health status below. On the last page, we have added some questions about the patient's general health status. We would highly appreciate if you could answer those questions and return the form to our address indicated at the bottom of this page.

Patient Name: _____ **Age:** _____

1. Frequency of dental check-ups

- Twice a year
- Once a year
- Never

2. Periodontitis

Periodontitis is a chronic inflammatory disease that causes irreversible destruction of the supporting structures around the teeth. Research shows that there is a bi-directional relationship between periodontitis and several systemic conditions, such as diabetes¹ and cardiovascular disease².

2.1 Patient periodontal status

- Patient has periodontitis
- Patient does not have periodontitis (continue to 2.3)

2.2 Patient treatment status

- Patient is being treated
- Patient is not being treated. Reasons for this: _____

2.3 History of periodontal treatment

- Patient has been treated in the past and is now receiving maintenance care
- Patient has never been treated

3. Oral hygiene

3.1 Oral hygiene routine

- Good
- Moderate
- Needs monitoring and encouragement

4. Presence of other oral conditions

- Peri-implantitis (inflammatory lesions in the tissues around dental implants)
- Xerostomia (dry mouth)
- Halitosis (bad breath)
- Caries
- Endodontic problem(s)
- Oral cancer
